The typical pathologic manifestations of vitamin C deficiency, including poor wound healing, are noted in collagen-containing tissues and in organs and tissues such as skin, cartilage, dentine, osteoid, and capillary blood vessels. Pathologic changes in affected children and adults are a function of the rate of growth of the affected tissues ...

Scurvy: Practice Essentials, Pathophysiology, Etiology

Hyperplasia is increased cell production in a normal tissue or organ. Hyperplasia may be a sign of abnormal or precancerous changes. This is called pathologic hyperplasia. It can also be due to the growth of completely normal cells. This is called physiologic hyperplasia.

Lines of Zahn are a characteristic of thrombi that appear particularly when formed in the heart or aorta.They have visible and microscopic alternating layers (laminations) of platelets mixed with fibrin which appear lighter, and darker layers of red blood cells. Their presence implies thrombosis at a site of rapid blood flow that happened before death. In veins or smaller arteries, where flow ...
