There can be little doubt that tropical forests hold a major proportion of species (see also Myers, Chapter 3 in this volume). It is generally supposed that our present knowledge provides a rough approximation of the relative numbers of species in the world's ecosystems and that about 80% of all species are terrestrial.

The Sixth Extinction: An Unnatural History is a 2014 non-fiction book written by Elizabeth Kolbert and published by Henry Holt and Company. The book argues that the Earth is in the midst of a modern, man-made, sixth extinction. In the book, Kolbert chronicles previous mass extinction events, and compares them to the accelerated, widespread extinctions during our present time.
