A laser is a device that emits light through a process of optical amplification based on the stimulated emission of electromagnetic radiation.The word "laser" is an acronym for "light amplification by stimulated emission of radiation". The first laser was built in 1960 by Theodore H. Maiman at Hughes Research Laboratories, based on theoretical work by Charles Hard Townes and Arthur Leonard ...

And in some ways, he convinces you that quantum mechanics is more natural than classical mechanics. He starts with wave mechanics and chapter 2 starts with particle in a box, simple harmonic oscillator, finite square well, Dirac delta function well and explanations of bound and scattering states.

On the other hand, the classical world is a limit of the quantum one. Therefore, it seems to be natural that an alternative to the Hilbert space version of quantum mechanics, compatible with classical physics, should exist. A promising candidate is the phase space formulation of quantum mechanics.

Complex analysis, traditionally known as the theory of functions of a complex variable, is the branch of mathematical analysis that investigates functions of complex numbers. It is useful in many branches of mathematics, including algebraic geometry, number theory, applied mathematics; as well as in physics, including hydrodynamics, thermodynamics, mechanical engineering, electrical ...
