mass of an object divided by its volume ($D=M/V$). Although it is easy to determine the mass of an object using scales, it is very difficult to determine the volume of an object that has an irregular shape such as the human body. It is possible to measure the volume of the human body by submerging a person in water, and measuring their weight.

The invariant mass of an electron is approximately 9.109×10^{-31} kilograms, or 5.489×10^{-4} atomic mass units. Due to mass – energy equivalence, this corresponds to a rest energy of 0.511 MeV. The ratio between the mass of a proton and that of an electron is about 1836.
