In series RL circuit, the values of frequency f , voltage V , resistance R and inductance L are known and there is no instrument for directly measuring the value of inductive reactance and impedance; so, for complete analysis of series RL circuit, follow these simple steps:. Step 1. Since the value of frequency and inductor are known, so firstly calculate the value of inductive reactance X_L : X_L ...

Instead of analysing each passive element separately, we can combine all three together into a series RLC circuit. The analysis of a series RLC circuit is the same as that for the dual series R L and R C circuits we looked at previously, except this time we need to take into account the magnitudes of both X_L and X_C to find the overall circuit reactance. . Series RLC circuits are classed as ...
