The heat conduction equation is a partial differential equation that describes the distribution of heat (or the temperature field) in a given body over time.Detailed knowledge of the temperature field is very important in thermal conduction through materials. Once this temperature distribution is known, the conduction heat flux at any point in the material or on its surface may be computed ...

Wien's Displacement Law. As can be seen from the figure, the blackbody radiation curve for different temperatures peaks at a wavelength inversely proportional to the temperature. Wien's law (named after a German physicist) describes the shift of that peak in terms of temperature.Wien's displacement law, and the fact that the frequency is inversely proportional to the wavelength, also ...
