It's often quicker to import data into MS-Access, do the transformation/analysis, and export it to another DB system, than it is to do that transformation on the larger DB system natively. I also love how I can write a VB function module, and have that callable from my Access-SQL query to transform data on the fly. It's so quick.

What makes it further interesting is the ease in mastering it, since the language used to interact with the database is simple (SQL in this case) and easy to comprehend. It is also worth being aware of the fact that in Relational databases, scaling and traversing through data is quite a light-weighted task in comparison to Hierarchical Databases.
