In order to get our application to work on Heroku we'll need to put our Django web application into a git repository, add the files above, integrate with a database add-on, and make changes to properly handle static files. Once we've done all that we can set up a Heroku account, get the Heroku client, and use it to install our website.

This tutorial is written to help people understand some of the basics of shell script programming (aka shell scripting), and hopefully to introduce some of the possibilities of simple but powerful programming available under the Bourne shell. As such, it has been written as a basis for one-on-one or group tutorials and exercises, and as a reference for subsequent use.

[The Shell Scripting Tutorial](#)

There was a time when HTML5, CSS3, JavaScript, PHP, and MySQL were used to be the main web development technologies to develop a website or web application.However, with the emergence of several new web development technologies, tools, frameworks, and languages in the last few years, it has now become quite challenging for one to decide what to learn (and what to skip).
