The Mesolithic site at Mount Sandel was excavated during the 1970s by Peter Woodman of University College Cork. Woodman found evidence of up to seven structures, at least four of which may represent rebuildings. Six of the structures are circular huts of six meters (about 19 feet) across, with a central interior hearth.

Current models of the Mesolithic settlement and mobility systems of northern England have largely resulted in a highly constrained view of the spatial use of the changing postglacial landscape. The ethnography of northern hemisphere hunter-gatherers in North America is at odds with such interpretations.

The Mesolithic (Greek: ?????, mesos "middle"; ?????, lithos "stone") is the Old World archaeological period between the Upper Paleolithic and the Neolithic. The term Epipaleolithic is often used synonymously, especially for outside northern Europe, and for the corresponding period in the Levant and Caucasus. The Mesolithic has different time spans in different parts of Eurasia.

Star Carr is a Mesolithic archaeological site in North Yorkshire, England. It is around five miles (8 km) south of Scarborough. It is generally regarded as the most important and informative Mesolithic site in Great Britain. It is as important to the Mesolithic period as Stonehenge is to the Neolithic period or Scandinavian York is to understanding Viking Age Britain.
