I will definitely do volume 2, but maybe not right away. I was thinking of blogging the solutions to either a linear algebra book or a topology book after I finish volume 1. (It makes more sense for my coursework to do one of those rather than a multivariable calculus book.) No problem on creating the solutions.

Derivatives in analysis. In real, complex, and functional analysis, derivatives are generalized to functions of several real or complex variables and functions between topological vector spaces.An important case is the variational derivative in the calculus of variations.Repeated application of differentiation leads to derivatives of higher order and differential operators.

Fractional calculus is a branch of mathematical analysis that studies the several different possibilities of defining real number powers or complex number powers of the differentiation operator $D = ()$,and of the integration operator $J = ()$,and developing a calculus for such operators generalizing the classical one.. In this context, the term powers refers to iterative application of a linear ... [Fractional calculus - Wikipedia](#)

Philosophers have debated for centuries whether mathematics is discovered or invented. Formalists believe that mathematics has more similarities with a kind of game, which does not need to be reflected by the outer world. Platonists, however, believe that mathematical concepts exist independent of human understanding. The relationship between maths and the world around us is an important
