C3 Photosynthesis Plants which use only the Calvin cycle for fixing the carbon dioxide from the air are known as C3 plants. In the first step of the cycle CO 2 reacts with RuBP to produce two 3-carbon molecules of 3-phosphoglyceric acid (3-PGA). This is the origin of the designation C3 or C 3 in the literature for the cycle and for the plants that use this cycle.

C 4 carbon fixation or the Hatch–Slack pathway is one of three known photosynthetic processes of carbon fixation in plants. It owes the names to the discovery by Marshall Davidson Hatch and Charles Roger Slack that some plants, when supplied with 14 CO 2, incorporate the 14 C label into four-carbon molecules first.. C 4 fixation is an addition to the ancestral and more common C 3 carbon ...

Prat tyasamutp da (Sanskrit, P li: pa iccasamupp da), commonly translated as dependent origination, or dependent arising, is a key doctrine in Buddhism shared by all schools of Buddhism. It states that all dharmas (phenomena) arise in dependence upon other dharmas: "If this exists, that exists; if this ceases to exist, that also ceases to exist".
