Pharmaceutical solids may be crystals, crystal solvates or hydrates, crystal desolvated solvates or dehydrated hydrates, or amorphous solids: All crystal forms described can exist in different forms called polymorphs: Polymorphs can have significant differences in their physical properties even though they are chemically identical.

Background: Numerous data show a role for genetic polymorphisms in the development of epilepsy. Previously, the TT genotype of the MTHFR 677C>T polymorphism was found to be associated with a decreased leucocyte DNA methylation status. Polymorphisms in the MTHFR gene could modify the pharmacodynamics of many drugs. This meta-analysis aimed to assess the relationship between MTHFR 677C>T ...

The heart of graduate education is research. The relatively small size of research groups in our department promotes enhanced interactions between the faculty mentors and the students, ensuring a first-rate education in impactful research areas. The Department of Chemistry at Georgetown University is equipped with state-of-the-art instrumentation to facilitate the wide array of research ...
