Probability theory began in seventeenth century France when the two great French mathematicians, Blaise Pascal and Pierre de Fermat, corresponded over two problems from games of chance. Problems like those Pascal and Fermat solved continuedto influence such early researchers as Huygens, Bernoulli, and DeMoivre in establishing a mathematical theory of probability.

We found a mean difference of 11. We found a $t(1) = 1.9411765$. The probability of this $t(1)$ or larger occurring is $P(t) = 0.0841503$. We were testing the idea that our sample mean of 61 could have come from a normal distribution with mean = 50. The $t(1)$ test tells us that the $t(1)$ for our sample, or a larger one, would happen with $p = 0$...
