Scanning electron microscopy Figure 29.6. The flakes are 50–100 μ m in diameter. SEM can also be used to examine the consolidated resin, as shown in Figure 29.7. This sample was freeze-fractured by immersing in liquid nitrogen for 1 h, then striking rapidly with a dull blade at a prescored mark [4], and clearly shows the UHMWPE flakes on the freeze-fractured surface.

Comparative biomechanics is the application of biomechanics to non-human organisms, whether used to gain greater insights into humans (as in physical anthropology) or into the functions, ecology and adaptations of the organisms themselves. Common areas of investigation are Animal locomotion and feeding, as these have strong connections to the organism's fitness and impose high mechanical demands.
