Summary. This manual describes NCO, which stands for netCDF Operators. NCO is a suite of programs known as operators. Each operator is a standalone, command line program executed at the shell-level like, e.g., ls or mkdir. The operators take netCDF files (including HDF5 files constructed using the netCDF API) as input, perform an operation (e.g., averaging or hyperslabbing), and produce a netCDF ...

The change in shape from a process, such as film deposition, is then used to calculate the stress, applying the principles of Stoney's equation. The Zeta-20 measures 2D stress by finding the height of the sample surface at user-defined intervals across the full sample diameter and then combining the data into a profile of the sample shape.

See Mathematical formulation for a complete description of the decision function.. Note that the LinearSVC also implements an alternative multi-class strategy, the so-called multi-class SVM formulated by Crammer and Singer 16, by using the option `multi_class='crammer_singer'`. In practice, one-vs-rest classification is usually preferred, since the results are mostly similar, but the runtime is ...
